Handling instructions

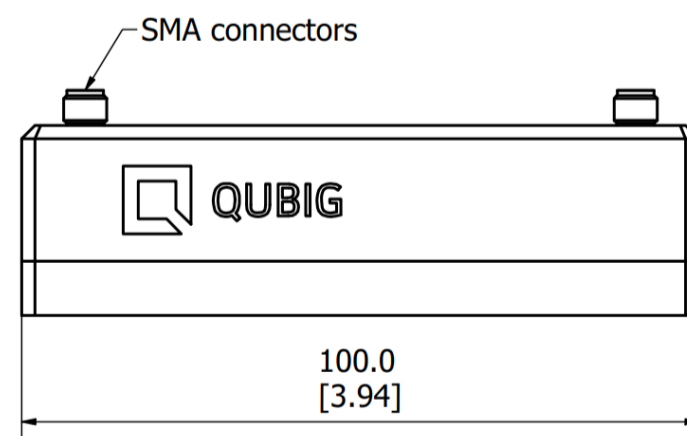

- Input laser polarisation must be aligned with respect to the white markers on the housing
- Radio frequency signal must propagate in the same direction as the light beam.
- An RF-attenuator must be used at the RF-out port.
- Please handle device carefully. Avoid shock. Do not drop.
- Slight angle adjustment can reduce unwanted residual amplitude modulation (RAM).

Operation configuration

The use of a long coaxial cable between the EOM and the RF attenuator is recommended to avoid heating for high RF power.
